1740 °F (949 °C) Solidus-Liquidus Temperature

P00820

1. SCOPE:

1.1 Form:

This specification covers a gold-nickel alloy in the form of wire, rod, sheet, strip, foil, pig, powder, shot, chips, preforms and a viscous mixture (paste) of the powder in a suitable binder.

1.2 Application:

This filler metal has been used typically for joining corrosion and heat resistant steels and alloys where corrosion and oxidation resistant joints with good strength up to 1300 °F (704 °C), but usage is not limited to such application. This filler metal is normally used for brazing, without flux, using a protective atmosphere.

1.3 Classifications:

Filler metal supplied to this specification is classified as follows:

- Class 1 Standard composition
- Class 2 Supplementary composition control
